

Module 5 Challenge Submission File

Archiving and Logging Data

Make a copy of this document to work in, and then for each step, add the solution command below the prompt. Save and submit this completed file as your Challenge deliverable.

Step 1: Create, Extract, Compress, and Manage tar Backup Archives

1. Command to **extract** the TarDocs.tar archive to the current directory:

```
tar -xvvf -C Tardocs.tar ../Projects
```

2. Command to **create** the Javaless_Doc.tar archive from the TarDocs/ directory, while excluding the TarDocs/Documents/Java directory:

```
sudo tar cvvf Javaless_Doc.tar /TarDocs/
```

3. Command to ensure Java/ is not in the new Javaless_Docs.tar archive:

```
sudo tar Javaless_Doc.tar | grep Java
```

Bonus

4. Command to create an incremental archive called logs_backup_tar.gz with only changed files to snapshot.file for the /var/log directory: sudo tar —listed-incremental=snapshot.file -cvzf logs_backup.tar.gz/var/log

Critical Analysis Question

- 5. Why wouldn't you use the options -x and -c at the same time with tar?
- -x extracts files while -c creates them so they can't run at the same time

Step 2: Create, Manage, and Automate Cron Jobs

1. Cron job for backing up the /var/log/auth.log file:

```
0 6 * * */4 tar-zcf/auth_backup.tgz/var/log/auth.log
```

Step 3: Write Basic Bash Scripts

1. Brace expansion command to create the four subdirectories:

```
sudo mkdir -p ~/backups/{freemem,diskuse,openlist,freedisk}
```

2. Paste your system.sh script edits:

```
#!/bin/bash
free -h > ~/backups/freemem/free_mem.txt
du -h > ~/backups/diskuse/disk_usage.txt
Isof > ~/backups/openlist/open_list.txt
df -h > ~/backups/freedisk/free_disk.txt
```

3. Command to make the system.sh script executable:

```
chmod +x system.sh
```

Optional

4. Commands to test the script and confirm its execution:

```
cat ~/backups/freeman/free_mem.txt
```

```
cat ~/backups/diskuse/disk_usage.txt
cat ~/backups/openlist/open_list.txt
cat ~/backups/freedisk/free_disk.txt
```

Bonus

5. Command to copy system to system-wide cron directory:

```
sudo cp system.sh /etc/cron.weekly
```

Step 4. Manage Log File Sizes

1. Run sudo nano /etc/logrotate.conf to edit the logrotate configuration file.

Configure a log rotation scheme that backs up authentication messages to the /var/log/auth.log.

a. Add your config file edits:

Rotate 7 missingok weekly notifempty compress delaycompress endscript

Bonus: Check for Policy and File Violations

1. Command to verify `auditd` is active:

```
auditctl -w
```

2. Command to set number of retained logs and maximum log file size:

Add the edits made to the configuration file:

```
-w /etc/shadow -p wra -k hashpass_audit
-w /etc/shadow -p wra -k userpass_audit
-w /var/log/auth.log -p wra -k authlog_audit
```

3. Command using auditd to set rules for /etc/shadow, /etc/passwd, and /var/log/auth.log:

Add the edits made to the rules file below:

4. Command to restart auditd:

sudo systemctl restart auditd

5. Command to list all auditd rules:

sudo auditctl -l

6. Command to produce an audit report:

sudo aureport -au

7. Create a user with sudo useradd attacker and produce an audit report that lists account modifications:

sudo aureport -m

8. Command to use auditd to watch /var/log/cron:

```
sudo auditctl -w /var/log/cron
```

9. Command to verify auditd rules:

```
sudo auditctl -l
```

Bonus (Research Activity): Perform Various Log Filtering Techniques

1. Command to return journalct1 messages with priorities from emergency to error:

```
Sudo journalctl -priority=0..3 or sudo journalctl -b -p emerg..err
```

2. Command to check the disk usage of the system journal unit since the most recent boot:

```
sudo journalctl -b -u -disk-usage | less or sudo journalctl -b -u
system-journald | less
```

3. Command to remove all archived journal files except the most recent two:

```
sudo journalctl -vacuum-time=2d or sudo journalctl -vacuum-file=2
```

4. Command to filter all log messages with priority levels between zero and two, and save output to /home/sysadmin/Priority_High.txt:

```
sudo journalctl -p+0..2 > /home/sysadmin/Priority_High.txt
```

5. Command to automate the last command in a daily cron job. Add the edits made to the crontab file below:
